

ABSTRACT

Religion for human life is very important, religious urgency for human life serves as a foundation, grip in life in the uncertain global era especially the Islamic religion which is the second largest religion in the world. A person who is Muslim is obliged to perform worship to Allah SWT with the rules, among which is reading the Qur'an and know the Islamic law through the hadith, it's just not possible to bring the Qur'an daily, and carry books of hadith like the book Bulughul Maram, Shahih Bukhari, Sahih Muslim, and other books to carry everyday. Therefore built an Android-based Muslim Asisstant Application, which provides Quranic content with translations, tafsir, tajwid, audio, and Hadiths surrounding Islamic law. The method used is an object approach with several tools and workmanship techniques using UML which consists of use case, ERD, table structure, and BPMN. The programming language used in designing and implementing this is JAVA, and the database used is SQLite

Keywords: Islam, Al-Quran, Hadith, Muslim
