

## ABSTRACT

*The Heart Special Hospital is a special hospital specializing in the treatment and healing of patients with heart disease. Space requirements at special cardiac hospitals were taken from the Minister of Health Regulation number 56 in 2014. The need for special cardiac hospital space is divided into several parts, namely types of services, human resources, facilities and infrastructure, and equipmen*

*Planning and designing of this Final Project focuses on several problem formulations: How to plan and design the interior of a Heart Hospital that can play an important role in the quality of service services, How to apply the theme taken to fit and solve problems in the Heart Hospital building, How to plan and designing the interior of a Heart Hospital as a health facility that can meet the needs of patients, How to plan and design facilities with a Heart Hospital spatial system that can meet the needs and serve patients' desires maximally*

*Data search method through observation method with literature study and field study, from the existing problems get a concept and theme of hasna medika heart hospital design that is related to the heart organ which is the identity of the hospital which produces the theme fun, clean and clear related to identity hospitals that must be hygienic which can be conceptualized in several key components as a unit of space factor, namely spatial planning patterns, main circulation, and space stability in creating a safe and comfortable impression for users in it*
