

## **ABSTRACT**

*Eyes are the window of the world. Humans can see and enjoy the conditions of their environment with healthy eyes. The eye has an important role in human life, because the eye is the only sense of sight in humans. So that eye health must always be maintained, because eye function will continue to decline with age.*

*The special eye hospital provides facilities that specifically serve eye health problems. As a public facility, visitors or patients come from various walks of life from various ages including people who have special needs. Universal design a product or facility so that everyone can take advantage of it without having to do the adaption process specifically.*

*Special medical services are required to provide safety and comfort for patients, doctors, and medical staff and other visitors. The universal application of technical design can provide the completion of building design that meets the criteria of safety, security, and comfort for user.*

*Keyword: Eye Special Hospital, Universal Design, Inclusive Accessible Hospital*
