

ABSTRAC

One of the facilities provided to support education in universities is the Library. The library is very important in every college, semantic institution that has a complete and good library, and optimally optimal (Sutarno, 2006: 46). It can be concluded that libraries are very important for a university because this will have an impact on progress and high prices. The University of Muhammadiyah Yogyakarta (UMY) has a center which is a means for students and the community to know, and this vision and mission is to provide information services to Kemuhammadiyah, Keislaman, and science. In the 2018 academic year, the Library Center of UMY will redesign the library, after UMY University will issue an Accreditation ever obtained in 2013 with A. Accreditation. Begin education at the UMY Central Library Building in D building specifically for 5-story library building However, the freedom of the floor used only for the second and half floors of the 2nd floor. Problems found in the Library Center of UMY are still not optimal in supporting the vision and mission of the Library of UMY. Lack of space outside is classified as books that are increasing every year and spatial planning that is not managed properly. So the conclusions are needed to redesign UMY's library center with interior study objectives that support the vision and mission of the UMY Central Library, and create a fun, safe, Islamic and comfortable library interior physically, visually, ergonomically, and psychologically to spur creativity, easy activities, and support the needs of visitors and staff. The expected results of this result will be the result for the Muhammadiyah University Library in redesigning the library in the future.
