

ABSTRACT

Boarding school is a system of schools with dormitories, where students and certain teachers live in dormitories that are in a school environment within a certain period of time. Usually one semester is interspersed with a one-month vacation to complete their school. Kashfia boarding school Bekasi is one of the junior high schools in the city of Bekasi, which is located in Jatikramat Village, Jatiasih District. The school was founded in 2000 under the auspices of the Salsabila Islamic Foundation. Putri Tashfia Junior High School is a special junior high school for girls. In general boarding school, especially Tashfia is located in a city but is remote and not easily seen from the highway. This is possible because this school building requires a large area because this school needs land for its dorm building as well. Of course schools like this also require more learning support facilities than schools that are not boarding. However, many of the boarding school schools also insist on standing on narrow land, precisely in the middle of the city. This causes space organization or space layout to be less effective as well as some facilities that should be needed to be unable to be provided there. Tashfia is located in the City of Bekasi, more precisely in the Jatiasih Subdistrict which is well known for its hot climate because it is influenced by the number of factories and increased land use, especially industry or trade and settlements. This also causes air pollution in Bekasi to increase. For that, there is a solution to reduce pollution and heat with a tropical design that is rarely or perhaps has never been implemented in Bekasi which is a design that adapts to the tropical climate. Therefore, the purpose of Tashfia boarding school interior design is to improve all activities that support there by providing new facilities that do not yet exist, organizing space organization or room layout to be more effective by dividing which areas are for the public and which for private. Making the atmosphere or atmosphere of the room there which is suitable for the type of school, can also make students feel more comfortable and relaxed in learning activities. Make a healthy and natural-looking room by maximizing natural lighting and ventilation that enters the room. This students will feel calm but can still focus on learning and receiving lessons.
