

## **ABSTRACT**

*Bandung is one of the most popular tourist destinations for local and foreign tourists. Located 140km southeast of Jakarta, Bandung is also the largest city in the southern of Java. Located in the highlands, the Lembang area of Bandung City has a green mountain atmosphere with temperatures ranging from 17-19oC. With the beauty of nature and the existing tourist facilities, making the city of Bandung especially Lembang an attractive tourist holiday destination to spend holiday time on weekends, and recreation also relaxes to eliminate boredom from daily activities. For that reason, we need an accommodation that can facilitate vacation activities, recreation and relaxation, one of which is the facilities presented by resort hotel & spa.*

*Resort hotel & spa hotel is one of the accommodation that serves as a temporary residence which also provides recreational facilities as well as relaxation in it. For this reason, the design of resort hotel & spa requires special designs that can provide a comfortable, safe and pleasant atmosphere for visitors. Through a method of analyzing the subject and design object by conducting a location survey as well as a comparative study. The natural elements found at the design site have a role in presenting a natural atmosphere in resort hotel & spa. Designing interior of Resort Hotel & Spa with a soothing natural atmosphere is considered to provide visitors with comfort so that visitors can become more refreshed when and after spending time at the resort & spa hotels that are designed.*

*Therefore, the purpose of Designing Interior Resort Hotel & Spa is to create a design that integrates with nature in accordance with the provisions of star-rated hotel facilities by considering the needs of visitors. Creating a comfortable and soothing atmosphere by presenting a natural atmosphere in its design.*
