

ACKNOWLEDGEMENTS

Foremost, I am gratefully to Allah Subhanallahu wa Ta'ala for a good health and well being that were necessary to complete this study. I would like to thanks to my first thesis supervisor, Prof. The Houw Liong, of the Informatics Engineering at Telkom University, for their continuous support my Master study and research, for their patience, motivation, enthusiasm, and immense knowledge. For me, He was the first person to introduce me about "Stock as my Thesis topic".

Secondly, I must said to my Co-Supervisor, Dr. Arief Fatchul Huda, of the Mathematics Department at UIN Sunan Gunung Djati. For me, He was the first person to introduce me to a new science about "Data Mining Basics". Including the person who helped me introduce the type of method I should use in this thesis.

Besides to my two supervisors, I would like to thank to all the lecturers of the master of informatics, especially the lecturers of the progress report test and the thesis exams for guidance and advice. Also I would like to thank to all academic staff of Telkom University, especially for Graduate School of Informatics Engineering who have provided all the necessary supports at the master program. Then I would also like acknowledge to IDX, who provided the source data for my thesis.

Finally, I must express my very profound gratitude to my parents, my sister, my brother and my friends: Widi Astuti, Ali Muhammad, Bernadus Anggo Seno Aji (2015-1 postgraduate students), Gugy Guztaman Munzi, Syukri Gazali Suatkab (my friends in 2015-2 postgraduate students), Bunyamin, Ramdani, Joni Saputra, Selly Meilina (2017-1 postgraduate students) and my fellows both in the "Residency room" and in the "Thesis guidance room" to providing me with the support uninterrupted and continuous encouragement throughout my years of study and through the process of researching and writing this thesis. Especially for Gugy Guztaman Munzi, I thank you as much as possible for helping me by providing assistance in the form of a Latex version of the thesis book template, so that it can save my time in making this Latex version of the thesis book. This accomplishment would not have been possible without them. Thank you.

Best Regard,
Hendra Wibiksana
