

ABSTRACT

Football is a form of sports games in the system group that is using the big ball, played by two teams, and each team consists of 11 players. Each team raced scored to Metpertandingan opponent becomes the winner. In this sport claimed to keep moving and running for the sake of achieving the objective in the set. With such organs, lung, muscle strength and body be trained sehingga durability of the body and the immune system will progressively increase. In a game, is there some line judges, referees, medical officer and team, fisiotreapis and backup players. One of which will be discussed in this research is medical. Soccer is a sport that forces the body to work until they reach the limits of the capacity of the ability of the body. In one match, both teams also often the same passion for the pursuit of victory, so a light clash-clash occurred, nor heavy collisions leading to the danger. To avoid unwanted things, FIFA created the medical standards which must be provided in every game of football. In this case the medical team in need right to countermeasures natural antecedent injury to the players. Each medical team must master whose name is first aid Emergency (PPGD), not only the medical team only, each element must be involved in this action.
