

## ABSTRACT

---

*SDN Sukabirus is one of the elementary school in Kabupaten Bandung which is still processing student value manually. With their many student data and student academic value made it difficult to find the student data and student academic value and the loss of data that will prolong teachers to processing data and student value. To assist teachers processing value manually in SDN Sukabirus, the solution is to build Web Based Application Student Value Processing in SDN Sukabirus, this final project uses Waterfall method and build with PHP programming language using Codeigniter framework, while to manage database using MySQL. With the availability of Web Based Application Student Value Processing in SDN Sukabirus, it can facilitate the teacher in recording and processing student value. In addition, headmaster also can see the results of the student value that have been processed.*
