

ABSTRACT

Hints Distro is a company engaged in the sale of merchandise by selling sandals, clothing and bags. Transactions that occur at Hints distributions are purchases, sales, and payroll, to the making of non-accounting reports and accounting reports. As a result of recording the payroll transaction and making manual reports, it causes uncultivated transactions not to be properly recorded, causing difficulties in conducting data searches, errors in entering nominal amounts and data may be lost so there are unrecorded transactions. To overcome this problem, web-based payroll calculation applications are built, and preparation of payroll reports. This web-based application was built with object-oriented methods and the development of the SDLC model and uses the PHP programming language and CodeIgniter Framework. This application has the functionality to manage employee attendance, manage wages based on sales, calculate total employee salaries, and produce journals, ledgers, pay slips, and payroll reports. It is expected that this application can provide convenience when preparing financial statements.

Keywords: Recording transactions, recording attendance, payroll calculations, journals, ledgers, payroll reports, salary cut slips, CodeIgniter Framework.
