

ABSTRACT

Processing Secondhand Clothing Made from Denim for Fashion Products Using Surface Textile Design Techniques that are Inspired by the Palembang Jumputan Technique

Many types of fashion products with well-known brands create Cimol Gede Bage Market encountered by the consumer from many quarters, however, the condition of its clothes is out of date. In contrast to the rest of the imported clothes made from denim in Cimol Gede Bage market. Due to its design that never changed and the material is strong, denim is sought after by consumers so the selling of denim is often found in Cimol Gede Bage Market even though there are some defects in certain parts.

In fact, clothing made from denim has considerable potential to be processed into fashion products, using surface textile , one of which was inspired by the Palembang jumputan technique.

The manufacture of this product started from the observation phase to Cimol Gede Bage Market and conduct interviews for data collection, and continued with a review of the literature through print media such as books, journals or through trusted websites. After the data is collected, then the next phase is exploration. Exploration used to determine the appropriate techniques to be applied on the denim which will be reprocessed.

From various of explorations that has been done, the secondhand denim clothing that has been treated with surface textile design is very appealing if applied to accessories products, especially such as bags and shoes.
