ABSTRACT

The State Islamic University of Sunan Gunung Djati Bandung is one of the universities that develops every year. This development comes from the increasing number of students every year and the increase in faculties and departments that are adjusted to the progress of work in the workforce today. Therefore, the State Islamic University of Sunan Gunung Djati Bandung must fulfill an increasing and quality education system

Exposing the education system in the State Islamic University of Sunan Gunung Djati Bandung, a library has been built as a means of fulfilling students' needs in increasing knowledge. This library has been designed to use technology that is quite advanced compared to other university libraries, but the library does not meet the standards of government regulations such as room needs and layout. And the application of technology to achieve the goals of intelligent libraries in libraries and changes that characterize Islam in accordance with the characteristics of the University

A library design that is capable of meeting standard needs is needed which is able to provide new experiences, improve activities, and provide rest periods by providing library buildings with library users to achieve goals as Smart Library
