*The era of globalization at this time education is needed to improve and increase the insights of each individual. The problems that often occurs within public schools is studentsoften have difficulty with themselves with the subject, teachers, the orderly school, and the school. In addition to his method of teaching in schools lacing pleasing the deserted condition was because teachers put labgels on the students ability, and the mood of learning which too crowded. So many parents whi prefer increase portions learn his son by enrolling to the early education or seeking for teachers les private. Search and reserving the teacher les private tutoring at an institue of learning a lot done manually by coming directly to the les tutoring to make reservations package learning. Sinau Yo present as an startup focusing in education. Sinau Yo attended with the main features the Sinau Offline. In Sinau Offline student can make a search teachers correspond to the subject desiredd by the studens, and do reservations package learning, and able to take a few friens to participate studying together in accordance with package learn selected. In the design application Sinau Yo, admin need information relating to data students, and teachers, data payment transaction, and data statistic. The dashboard admin needed to control and support the business Sinau Yo. Design dashboard admin done by using the method iteratice incremental. This research will yield a page dashboard with the goal of assiting in verifying admin teachers and alsi the doing of the control for payment transaction, and there are statical data to help Sinau Yo in determining business strategy moving forward.*
