

## **ABSTRACT**

*Subang Regency is a district that has a fairly extensive pineapple garden. The surrounding community used to process the fruit for processing snacks such as dodol and also wajid. But a small portion of the skin is stacked and mixed with banana peels to be used as organic fertilizer. While most of the unused waste can pollute the environment. The potential of pineapple skin as the main ingredient that has a unique texture to make jewelry products is very high, it was agreed to raise the name of Subang district, processing pineapple skin into jewelry products can reduce organic waste. The trial process of pineapple skin as the main ingredient for jewelry products, the target market is adult women aged 19-35 years. The process of this research, using qualitative methods, by collecting data through literature studies, interviews and questionnaires. Then in the analysis with material experimental methods. This research is to solve problems that can be solved.*
