

ABSTRACT

*Saparua is a sports area facility in the Bandung area. In this area there are various kinds of facilities and infrastructure for sports such as running track, roller skate track, skateboarding, volleyball, basketball, badminton, wall climbing. Unavailability of first aid kits Sports facilities Saparua is one of the problems in public facilities in Saparua Sports Center The purpose of this research is to improve and support public facilities, especially in the medical field. The research method used in this design is a qualitative method. According to John W. Creswell in his book *Research Design: Qualitative, Quantitative, and Mixed Method Approaches* (2009), procedures for collecting data in qualitative research involve four types of strategies namely observation, interview, documentation, and audio-visual. The data collection technique used is the results of observations in the location of Saparua Sports Facilities. The results of the research obtained are in the form of data and any needs that will be applied to the products to be designed.*

Keywords: Facilities, sports facilities, medical, innovation, and design.
