

ABSTRACT

Waste is a problem that has not been resolved to the fullest. Even though waste has been classified into three types, many people still dispose of garbage not in accordance with their class or even littering. This is a habit that must be changed and taught from an early age. By giving an example of throwing garbage in its place. Education can be provided formally and informally, starting from the family environment, school, and other outdoor environments. In this case the education provided is environmental education regarding waste. Education for children is done by learning while playing, because these activities will get more enthusiasm than children. Tourist attractions become one of the locations that can be used to carry out educational activities. Moreover, the tour is an educational tourist spot. Ade Irma Suryani Nasution Traffic Park is one of the educational tourist sites that has the potential to be used for garbage education activities. The media used for educational activities is a 2-seater caddy car designed in such a way with the design method S.C.A.M.P.E.R. This was chosen so that educational activities could move to various points in the Ade Irma Suryani Nasution Traffic Park area. In addition, redesigned the cabin space to fit the needs, in contrast to the caddy car cabin space in general and provide more comfort for vehicle users.

Keywords: Garbage, Education, Caddy Cars, and Users.
