

Introduction

The Qur'an is very important for humanity, especially for Muslims¹. Al-Quran becomes a life guide for Muslims. It is very fitting for the muslim people to understand the content or meaning contained in the Qur'an which speaks Arabic. To understand the contents of Al-Quran one of the ways is to understand each word contained in the Qur'an to take lessons or meaning. Technology in the world has been very developed. Many technological inventions or products, especially in the field of IT or computer programs. Many computer programs now process human language. And it is not impossible that the language of the Qur'an can also be processed by this computer to help people learn the Qur'an which is to know the contents in the Qur'an. To find out the meaning of the words of each word in the Qur'an it will be easier if you know what kind of word is. Because the Qur'an is built in Arabic and as it is known that the words in Arabic are many of the other languages, therefore easier to make a computer program to identify the types of words in the Qur'an. One important constituent component in Arabic is the verb. Understanding verb in Arabic language is the first step to understanding the whole morphology concept (saraf) or syntax (nahwu) of Arabic language. It can be started from identifying what type of verb is in the Qur'an. So that in the learning process there is no need to continuously open the book (dictionary) manually.
