

ABSTRACT

Dinas Komunikasi dan Informatika Kabupaten Ketapang is one of the official work units in the district government of Ketapang Regency. Dinas Komunikasi dan Informatika has the duty to assist local governments in organizing affairs in the field of communication and informatics. For the implementation of its responsibilities, the Ministry of Communication and Information certainly needs financing. For such financing, financial recording and reporting must be conducted. In the implementation of financial recording and reporting is still done manually using Microsoft Excel and manual journal books. This application was built to help recording and financial reporting of local governments using the cash basis method, especially in the budget realization report. This application was built using the PHP programming language and the CodeIgniter Framework (CI). To overcome the problem, this application has functionality including recording programs and activities, making work plans and budgets, recording income and expenditure, changing work plans and budgets, displaying accounting records in the form of journals and ledgers, and financial reports in the form of budget realization reports. This application before it is implemented directly, it must be tested. For the test used is Black Box Testing. The method of working on software uses the Software Development Life Cycle (SDLC) method.
