

## ABSTRACT

---

*PT. Sujud Broiler is a place to sell cut chicken and some processed chicken meat, including chest fillets, thigh fillets, claws, wings, gizzard, intestines, bones and so on. At PT. Sujud Broiler in managing data on purchases, production and sales that are not integrated and have not been able to compile production reports and sales reports. Therefore web-based applications are made to arrange production according to order so that they get the order price card, and record the right sales. Workmanship This application with a structured programming method, built using the SDLC Waterfall method using the PHP programming language CodeIgniter with MySQL database. Applications can produce, ledgers, journals, order price cards and sales reports. Thus, this application can help PT. Sujud Broilers to manage data.*
