

Abstract

Sharaf is one of the branch of the Arabic language that is study of word changes. Fi'il (verb) changes into several pattern into two ways, pronoun and type of verb. How to produce words with various types of fi'il and dhomir in one table-shaped wazan, which are only obtained from one verb in the Qur'an. In the process, the user only needs to enter the verb from a wazan, then the output is in the form of other verbs with various fi'il and dhomir from the wazan. The testing data used are two, the first data which contains a list of fi'il patterns that the author took from several book references and the second is data in the form of fi'il (verb) directly from the Qur'an through <http://corpus.quran.com>. The accuracy of the result 97%.
