

ABSTRACT

The National Electricity Company (PLN) as a company that is authorized to manage electricity in Indonesia certainly has considerable responsibility, considering electricity is one of the needs that controls a lot of people. In accordance with the mission, PLN has made electricity as a medium to improve the quality of life of the community, strive for electricity to be a medium of economic activity and run business activities that are environmentally sound. Therefore, as a company that has great responsibility, PLN improves the quality of its employees' performance and professionalism. And continuously improving the efficiency of the company, especially increasing service to customers with activities that include providing new facilities, it is necessary to improve the PLN office building. The interior design of PT. PLN (Persero) Riau Region And Riau Islands is a design design, this design aims to design workspaces in accordance with the divisions of each space. In this design project the interior of the PT. PLN (Persero) Riau Region and Riau Islands will create a space atmosphere. The expected atmosphere of space is that it can express different division characters through the application of forming elements and interior fillers. The interior is not only focused on one room, but every room has a different interior. By applying the atmosphere of the space it is hoped that it can help employees to feel more comfortable when in the work area.

Keywords : PT. PLN Office (Persero), room atmosphere
