

Abstract

In the present era where the rapid development of information technology all things that cover human activities can be helped. Like all information needed can be digitized. Information exchange can be done quickly nowadays especially on campus. All things that cover the scope of the campus can be digitized such as learning, administration, campus information. Thus the use of technology to support campus services is formed by the Intellegent Campus. The Intelligent Campus consists of iSocial, iGreen, iHealth, iManagement, iLearning and iGovernance. Telkom University has implemented the Intelligent Campus system implemented on the igracias website where this website has provided iManagement, iLearning, iGovernance. The need for iSocial is not yet available to support the social interaction process that focuses on the campus scope where social interactions between students, teaching staff, and other campus entities cause many interactions to occur that can benefit their activities. Thus the need for applications that support this. Isotu application is an application that is made based on mobile, this application will later help students in social interactions such as to find friends who have the same hobbies and from the same area of origin for those who want to make new friends, communicate with other students, find events that on campus, share daily activities.
