ABSTRACT

Berkah Sadaya Cooperative is a cooperative that conducts the business of financing needs of members and managing members' deposits. The process of recording each member transaction and file is still recorded on paper that has been printed using excel format and using Microsoft Excel. Financial records still use simple financial statements, namely recording incoming activities and outgoing activities. Constraints experienced are in the form of financial records and data that is slipped or even lost. Therefore, this web application was built to manage computerized data and help the performance of cooperative managers. This web-based application was built with object-oriented methods and development of Prototyping models, as well as using the PHP programming language and Codeigniter Framework. This application has the functionality to manage member data, manage member deposits, manage financing transactions, produce accounting records in the form of general journals, ledgers, adjustment journals, trial balances, and worksheets, produce financial reports in the form of calculation of residual results, member savings reports.
