

ABSTRACT

Information Technology is a technology that used to manage data so it can produce high quality and valuable information. Binekas School is the one of the schools that has followed technological progress, where the school already have its own website. Binekas School in the end of semester uses offline report cards as a medium to convey student grades in one semester and student development to parents, which is the offline report cards are very sensitive to loss the data. Input the data also takes a long time because you have to fill it manually.

Based on these problems it will be made a website-based digital report card application where this application can present information about student data and grades. The programming language used is PHP with laravel framework and the databse is MySQL.

This application is expected to be able to help fill student grades to be more effective, time efficient and prevent data loss.

Keywords: Digital Report Card, PHP, Laravel, MySQL.
