When building a master data management system at PT XYZ, business people or users of organizations cannot monitor and cannot manage data on the system, so that master data management cannot run properly, one effort that can be done by users is to create a presentation service which can monitor master data using a dashboard to visualize data and perform data management by users on the organization. presentation services must be well designed so that master data management at PT XYZ can run well and can provide the information needed to the organization. The design of this presentation service uses the pureshare methodology and uses the Laravel framework that is open source. This presentation service is expected to facilitate users to monitor data and carry out data management so that the master data management system can run properly.

Keywords: master data management, presentation service, dashboard
