Zakat is one of the obligatory worship for every Muslim. Based on research data from BAZNAS in 2016, the potential of zakat in Indonesia can reach Rp. 286 trillion. But in reality, the collected zakat only reaches Rp. 6 trillion or only about 2 percent of the potential of zakat. In 2017, Rumah Yatim was granted permission as Lembaga Amil Zakat Nasional (LAZNAS) and has the legality to collect and manage zakat. Currently, the purchasing department of Rumah Yatim haven't used a system to make purchases and haven't been integrated with other department, so if the purchasing department changes a data, other department won't get the data changes in real-time which will have an inefficient use of time. Therefore they need to implement an information system technology that focuses on the purchasing management that can automate and integrate with other department. This study used the Quickstart method to help run the ERP system. To find out the current purchasing business process, an interview with the purchasing staff was held at Rumah Yatim. The result of this study is the ERP Purchase Management module design using the Odoo software.
