The Indonesian textile industry is increasingly growing because the results or profits obtained are promising, therefore competition in the textile industry is very tight. CV. Berkart is a company engaged in the textile industry. Products produced by CV. Thanks to various types of fabrics such as shirts, cotton fabrics, and various other textile products. One of the business processes in a CV. Blessing is in the accounting and sales department. The business process in the accounting section relates to the activity of recording and analyzing the costs associated with purchasing activities. While the sales department discusses the process of selling goods to customers. CV. Berkart does not yet have a system for managing accounting and sales. The main problem in the accounting department is the absence of a counter-document manufacturing system and the absence of integration between the accounting, inventory and purchasing sections. This, of course, makes all financial data can be controlled using the system without having to manually check documents. Then in the sales department, there is no system for the sales process and there is no sales department with accounting for making financial statements.

Corporate Resource Development Planning (ERP) can be a solution to this in the CV. Thanks to. The ERP system used is Odoo. Odoo is an open source software that is widely used by various types of companies. Development of ERP systems on a CV. Blessings using the Odoo Quickstart Methodology. This methodology is very suitable for companies like a CV. Blessing is a Micro, Small and Medium Enterprises (MSME) company

ERP System Development on a CV. Blessings to overcome the problems that exist in the accounting and sales department so that the company process can be facilitated properly, effectively, and efficiently. The Accounting Module and Sales Module in Odoo will help improve the accounting section of the financial recording and reporting process better and also help increase sales to manage the sales process. For the evaluation of research, researchers use the system scale of use to measure the use of interfaces that have been made.
