

ABSTRACT

The population in Rembang district from 2015 to 2019 continues to increase, increasing the need for health facilities. The number of beds available from three hospitals in Rembang Regency also does not meet the ideal ratio with the population. Bhina Bhakti Husada Hospital is a public hospital with class C which has the vision of becoming a class B hospital in the third year. So that the Bhina Bhakti Husada Hospital needs to be upgraded to support the needs of the current Rembang community. Interior Re-Design Bhina Bhakti Husada Rembang General Hospital is a redesign that is located at Jalan Pemuda KM 04, Rembang Regency. This design aims to create an effective and efficient space organization and according to standard hospital buildings.

The re-design of the interior of the public hospital Bhina Bhakti Husada creates optimization of space to support user activities effectively and efficiently, as well as the atmosphere of the room that provides comfort and can reduce patient stress. The design is focused on creating an effective and efficient space organization and adding facilities in accordance from minister of health standards.
