

## ***ABSTRACT***

Human resources development through sports expected to be able to create productive, honest, sporty and have fighting power and high competitiveness. GBHN (Garis-garis Besar Haluan Negara) / (Outlines of State Policy) 1993, about the sports sector. Includes the direction of the development of the sports sector, conservation of sports culture, and healthy focus that encourages the active participation of the community. Provision of adequate facilities and infrastructure and professional development systems. Soccer coaching on challenging national teams that are formidable with achievements that support the nation and country. Coaching is based on proving the system of football coaching, player training, club coaching and competition coaching. This establishment training center is designed to support, channel and foster education and achievement of talented players. The need for central education facilities and soccer training that can accommodate the process of fostering players with very good needs, channeling and fostering education and the achievements of players who contribute to improving the achievement of national football. Football is one of the sports that requires each player to master various kinds of techniques such as passing, stopping, dribbling, heading, shooting. Mastery of these techniques will reflect the level of skill possessed by soccer players. The main facilities include technical areas and training areas with dormitory, office, hall and other supporting facilities. In order to get a comfortable space for learning and learning, it can support discipline so that this space is needed for the purposes in it. Therefore, it was chosen to support this problem and supported the deepening of space requirements. The aim of this training center is the creation of professional athletes who have the talent for soccer and tactics. In accordance with the view of sports not only physical or spiritual body, but also must be in accordance with the basic sciences or tactics of soccer games, the design is more in accordance with the needs of each building according to their individual needs.
