

ABSTRACT

Garsel Fashion Shoes company is one of the industrial fields engaged in shoe making in Indonesia. Garsel, has business activities which include selling bags, wallets and clothing, but the biggest business in this company is the sale and manufacture of shoes.

Several processes at Garsel caused a lot of financial records occur, the process of recording was still ineffective and integration was still lacking so this caused the transaction in the company to take a lot of time, causing the process of information received by managers and finance director of the company to be hampered so need to be made a system based on Enterprise Resource Planning (ERP) that was developed as supporting technology within the company. ERP has several modules, one of them is the Accounting module that is needed to record the financials as well as possible and centralized.

With the concept of ERP implementation in the Accounting using Odoo to make financial records better and integrated with other divisions this will facilitate the work of financial operators in the company in managing their financial processes. In the design researcher uses the RAD method which is an appropriate system to be used for the needs of a high dynamic level system, as well as limited availability of time and development budget.

Key Words : Accounting, ERP, Integration, RAD Method.
