

ABSTRACT

Indonesia is the biggest archipelago country in the world. Indonesia has an area of 1,904,569 km² with a total of 17,508 islands. Until now, there are still many Indonesian people who use Sea transportation facilities to cross the Island. Every corner of the Island in Indonesia has a Port for these Vessels to lean on. Merak Port in Banten is one of the busiest Ports in Indonesia, because every day it serves 32 trips on Ferries that cross from Java to Sumatra Island through the Sunda Strait. The Passenger Terminal is one of the available facilities in the Port of Merak which serves as a gathering place for Passengers to carry out activities to come, go and wait. To meet the needs of these activities, a comfortable and safe facility is needed for users with varying backgrounds of different circumstances, needs and age ranges (Universal Design). The existing interior space must be able to accommodate users with a variety of different backgrounds in order to be able to carry out the activities in the port process quickly, easily and comfortably.

Keywords: *Interior, Passenger Port, Facility, Circulation, Universal Design.*
