

ABSTRACT

Marble is one of the types of rock that included in metamorph or malihan rocks, where the process of formation itself is caused by the process of metamorphosis of limestone or limestone. Marble often used as an interior and exterior materials for homes, offices, and hotels. It is applicable for floors and walls, also furniture such as tables, chairs, home accessories, and so on.

Currently in Indonesia there is no museum specifically for marbles. For this situation a place for conservation and collection repository is needed, known that marbles is a scarce and nonrenewable natural resources. This project presents about how marble is not only just a material for furnitures, interior, exteriors, but also it the potential and function to domestic and non domestic society.

In addition, the Indonesian Marble Museum will be an educational place in the introduction of marble, by displaying a chronological storyline with a different space atmosphere assisted by technology media that will make this museum more attractive and interactive to visitors
