

ABSTRACT

Al-Quran is a living guide for Muslims, therefore Muslims should learn more about the Al-Quran. Nowadays, human interest in the Al-Quran is decreasing. from the House Quran data of the Sunan Gunung Djati State Islamic University in Bandung, about 54% of Muslims in Indonesia have not able read the Al-Quran. These data show the low of interest to read Al-Quran .Based on questionnaire with 93 respondents, 67.7% of Telkom University students were not fluent in reading the Al-Quran. hence, there ara many solutions, one of them is develop an application called "Ngaji Asik!: Privately Al-Quran Learning Application " be made. This application is made to facilitate the students to study anytime and anywhere assisted by private teaching staff. This application allows students to arrange their own schedules and places of study. From the business side, teachers get paid for services with certain parameters. The main user target is teenagers who tend not to have free time in learning the Al-Quran but still have desires to learn to read the Al-Quran. Application development methods use the waterfall method from Roger S. Pressmann. The analytical method uses quantitative methods with surveys and qualitative interviews. Applications are built on the Kotlin programming language.
