

ABSTRACT

Bandung Regency Government plans development in the strategic area of Bandung Regency. Priority area to be developed in one of the Soreang areas which is the central government area in order to fulfill village community empowerment assistance, it is necessary to have facilities to support community activities for empowerment sites consisting of community activity centers with the aim of increasing human resources, one of them in Soreang District . Some community empowerment centers found deficiencies, such as facilities & infrastructure not in accordance with the needs of space and users. The area of space needed does not meet the standards and needs of furniture and the layout of furniture arrangement that is not right. So the interior design of Bandung Regency Community Activity Center prepares to facilitate the activities and needs of the community according to user needs, space requirements according to standards, lighting design and natural ventilation with bioclimate design principles that respond to natural needs that support visits from adequate locations, environments and air environments And the design is expected to provide a stimulus to increase the enthusiasm for learning and active participants of Yayasan Wadah activities.
