

ABSTRACT

Hints Distro is a company engaged in the sale of merchandise products sold, namely clothing, sandals and bags. Transactions that occur in Toko Hints are purchases of merchandise and sales that are still done manually starting from recording sales to making non-accounting reports and accounting reports. As a result of recording transactions and report generation manually, causing transactions to be untidy and scattered, causing difficulties in conducting data searches, errors in entering nominal amounts and data may be lost so that there are unrecorded transactions. To overcome these problems, web-based applications for sales transactions are built, management of accounts receivable with the method of backup and preparation of statements of profit and loss. This web-based application is built with object-oriented methods and the development of the SDLC model and uses the PHP programming language and CodeIgniter Framework. This application has the functionality to manage sales transactions, manage receivables and can produce journals, ledgers, sales reports, accounts receivable, expense reports and income statements. This application can provide convenience when preparing financial statements.

Keywords: Transaction management, receivable write off, sales reports, income statement, CodeIgniter Framework.
