ABSTRACT

Hints distributions are one of the companies engaged in the sale of merchandise sold such as tshirts, shirts, sandals and bags. Transactions carried out at Hints distributions are purchases of merchandise and records that occur are still recorded manually starting from the purchase of merchandise to the making of non-accounting reports and accounting reports. Recording of transactions is still manually, can cause errors in recording. In addition, it can cause difficulties in conducting data searches and errors in entering nominal and data loss, so there are unrecorded transactions. Web-based applications are built with object-oriented methods and SDLC model development and use the programming language PHP and CodeIgniter Framework. This application has the functionality to manage purchase transactions, finished goods inventory using the first in first out (fifo) method, delivery of raw materials, receipt of finished goods, general journals, ledgers, purchase reports, inventory cards and cash flows. This application can provide convenience from the purchase transaction to the preparation of financial statements.

Keywords: purchase of merchandise, merchandise inventory, inventory cards, cash flow, CodeIgniter Framework.
