

ABSTRACT

Klinik Pratama Selamat is a company engaged in services and trade. Klinik Pratama Selamat has been doing manual recording, from transactions to the preparation of financial reports in the company. This causes unclear data on the recording of transactions and expenses such as expenses incurred by the company. So that it takes an application that can support company activities carried out with an Android-based. With this application, it is expected to simplify the process of recording, service, calculation, expense and company financial statements which consist of income statement, cash flow statement, chart, and report on changes in capital.

Keywords— Klinik, Application, Service, Android.
