

ABSTRACT

Previously, the Central Bureau of Statistics in assisting the census process Usually requires many volunteers to become officers to carry out records by carrying paper with various kinds of questions. With this application it can be easier both in terms of population and officers, only by logging in and inputting all the data provided correctly and the officer sends some kind of forms to the application after making an agreement on the population census data. This application uses Codeigniter, XAMPP, and to create entity diagrams needed in the census recording application. Therefore, it is necessary to "Web-Based Application of Population Census Registration in Bandung City" which will later facilitate the recording at the Central Statistics Agency. And based on the results of tests carried out can help the relevant agencies.

Keywords: Central Statistics Agency, Population Census.
