ABSTRACT

The development of information technology has made many companies at the airport start developing online information systems, this information system has incomplete features, because in this Final Project an Information System Application Provider for Airport and Tourism Services Based on Websites and Web Services is Based.

With this application, making it easier for users to carry out their daily activities while traveling, and provide information in the form of flight schedules, travel info, prayer schedules, etc., this application was developed with a prototype model and uses PHP programming language that makes it easy for users to see this application.

From the results of the implementation and design testing carried out, it was found that all functions in the information system worked well and in accordance with the design results.
