## *ABSTRACT*

*The company has problems in registering and inputting job vacancies in the employment service. The company must come directly to the local labor agency, to see data on job seekers who have entered and the types of work that are in demand by job seekers. Another link is the relationship between companies and job seekers, job seekers come directly to bring their identity. The author found obstacles - registration and inputting job vacancies in the Bandung Regency labor agency. In this module there are functionalities, vacancy entries and data on applicants who have applied. The method used in the construction of the online job market in the Bandung Regency Manpower Office (Company Module) is SDLC with the Waterfall model, using the PHP programming language and framework used is codeiginter with MySQL databases and testing using Black Box Testing. So that it is expected that the online job market (job search module) in the Bandung Regency Manpower Office (Company Module) can run efficiently and effectively.*
