

ABSTRACT

Overconsumption of population density has caused the amount of waste to increase, for example Bandung city. Bandung is a city of tourism that has so many typical souvenirs and traditional food, for example Mi Kocok. Mi Kocok is a special dish that uses noodles and beef broth. Beef broth is cooked by using beef bone stew as a main ingredient. Therefore, we would like to induce a cow bone waste into a jewelry and accessory. In this design, the use of waste cow bone is the main material of jewelry. To get a good beef bone for material of jewelry, the author did some research, that is observation, study of case, and interview with the owner of cow bone handicraft. The methods for processing has been obtained from several experiment. A clean and odorless cow bone can be made as the main material for a jewelry.
