

ABSTRACT

The examine scheduling application is an application that is used to create a final project schedule for students in the Faculty of Sciences at the University of Telkom. This application was built to facilitate each study program in making a trial schedule, because the current process still uses Microsoft Excel, which requires high precision to create a trial schedule using Microsoft Excel. This application aims to facilitate and homogenize each study program in the process of making a trial schedule and petrifying in plotting examiners. The application is built using the PHP language, based on the website and with the CodeIgniter framework. The application development process uses the SDLC Waterfall method. This application is expected to be used and applied to the Telkom University Academic Information System.
