Abstract

Coworking is a work or office environment that is used by people who work alone or work for a company, specifically coworking space offers a different work environment both in the atmosphere of the room and its users are also from various groups such as entrepreneurs, freelancers, startups, associations, consultants, investor, artist, researcher, student etc. Here the members are free to work in accordance with the wishes and comfort of each according to the character of their way of working. In this design aims to facilitate and facilitate users to work collaboratively with fellow members, expand connections, relationships, share ideas and experiences to create collaboration between users. This design process uses a design method consisting of analysis and synthesis that collects the entire data and then processes it into an alternative design that can provide the optimal solution in solving the problems faced. The application of modern style and Sustainable design principles and other supporting interior elements is expected to optimize activity and movement in a coworking.
