

ABSTRACT

Dapur Mungil Ifana's is a micro-business engaged in the sale of cakes located in Kediri, East Java. Currently, Dapur Mungil Ifana's manufactures various kinds of cakes such as pastries, market snacks, cakes, and snack boxes. Sales are done by the owner spreading product information on social media then customers place an order through WhatsApp then the sales are recorded manually using books and Microsoft Excel. This is an obstacle in Dapur Mungil Ifana's . Where the owner checks orders and calculations repeatedly so that the work is increased. Therefore, to overcome these obstacles web-based applications are made using the PHP programming language, Codeigniter Framework, MySQL database and using the prototype development method. then with this application can handle the recording of sales to the preparation of financial statements. Besides this application can display products, ordering data, payment, and financial reports such as journals, ledgers, sales reports, and income statements. Testing on this application uses black box testing.
