

ABSTRACT

Dapur Mungil Ifana is a micro, small and medium enterprise (UMKM) that is engaged in selling cakes located at Jl. Rinjani Tegalan Village RT 02 / RW 00 Kandat District, Kediri. In its journey, Dapur Mungil has some obstacles in recording the purchase of raw materials, supporting materials (supplementary materials), packaging, and assets that still only use Microsoft Excel applications. Another obstacle is the recording of supplier data which is still recorded in the book manually. To overcome this, the application is made with object-oriented programming techniques with the PHP programming language and Code Igniter framework and based on MySQL data. The method for developing this application is the Prototype method. Thus, companies need applications that can produce records in the form of journals, ledgers, trial balances and statements of financial position. This application can handle the recording and calculation of purchases of raw materials, auxiliary materials (supplementary materials), packaging, and assets that are tailored to the needs of the order in the Dapur Mungil. This application is also able to display supplier and purchase data in detail. Testing on this application is done by the Black Box Testing method.
