

ABSTRACT

The state of Indonesia is the state agraris or could be called countries with a majority population of livelihood was farming. According to Mosher (1966), agricultural sector is a form of production that is distinctive, based on the process of growth in plants and animals. Farmers manage and stimulates growth of plants and animals in a farming, where its operations are businesses in their own, admitted the fact of expenditure and income is quite substantial. Of the manifestation of the holy see the allegation of farmers, the writers, which according to Fadholi Herman, farmers is every single person who conducts the business of to meet part of funds or of the needs of her life in the fields of agriculture in a wider sense which includes agricultural farming, animal husbandry, fisheries (including fishing), and give priority to the fisheries products. According to Dwi Basuki Asdono (2010), of shoes are the garment for the legs and feet is a member of living bodies and moving, and the earth with the asymmetrical structurally and his movement. A movement of the legs complex is the gesture of the interconnected of many bones. That is why in making shoes we may not, must follow anatomy legs and the rules naturally certain and technology, so that the result of a shoe gained may suitable and appropriate and good worn on the feet.
