PT Albasia Nusa Karya is a wood cutting manufacturing company that was founded in 2015 in the City of Garut, West Java Province. The resulting product is in the form of barecore. Barecore is a piece of albasia / sengon wood that is cut into strips of the same size and glued together with glue to form sheets such as plywood / plywood. PT Albasia Nusa Karya currently does not have a business process support in the form of the application of information technology, especially in the development of the human resource unit. To overcome these problems, PT Albasia Nusa Karya needs to design an enterprise architecture that can help provide solutions to business processes and technology to achieve the company's vision and mission. The design of enterprise architecture uses the TOGAF ADM framework which consists of the preliminary phase, vision architecture, business architecture, information system architecture, technology architecture.
