ABSTRACT

Monitoring tenant and loan room web-based is an application that serves to collect data on loans in Bandung Techno Perk. The purpose of the construction of this application is to build a system that can facilitate employees in managing data on loaning space and reduce the risk of data loss and time efficiency in revenue recapitulation. The method used in this application is the waterfall method with the CodeIgniter programming framework, the tools designed for the Unified Modeling Language, and the Black Box Testing and User Acceptance Test applications. The research carried out is expected to make an application to store data on loaning rooms to be organized..
