

ABSTRACT

Financial education at this time still relatively low in Jakarta City. This background can be viewed by the lack of awareness on saving and investing, increasing financial literacy index, lack of awareness on insurance and revenue increasing in society. Certainly, financial education has great benefits as a component to achieve public financial prosperity. When financial education in society provides efficient results, the role of financial capability as a financial and financial education mediator is needed in this research.

This research is aim to look at the role of finance as a mediator of financial education and financial satisfaction. The method that used to collect data with issued questionnaires on 400 respondents with productive ages in the city of Jakarta. This research adopts and use Sobel test to examining the influence of mediating financial education and financial satisfaction. The outcome of this research shows that financial capability proves in partial form of mediation in relationship between financial education and financial satisfaction.
