

ABSTRACT

The museum is one means to broaden horizons and increase knowledge. In the museum, we will gain knowledge and insight in a way that is fun and more effective. The geology museum is one of the museums where we can learn and know about geological materials, such as fossils, rocks, minerals with fun interactive educational facilities. Geological museums are in great demand by both local and international students and students alike. They make the geology museum as the most popular tourist attraction in the city of Bandung. However, there are still some problems in this museum, both in the atmosphere, space that is less supportive, facilities and infrastructure, circulation channels, security of collection objects, and lighting in visual aids that are still less than optimal. Therefore this interior design aims to develop a geological museum into a museum that can provide a new atmosphere for visitors and provide comfort to visitors of the museum and can change people's perception of museums that are boring and unpleasant to visit into an interesting and pleasant museum to visit.

Keywords: interior, education, recreation, atmosphere, security, circulation.
